DETAILED ACTION

Claim Rejections - 35 USC § 112

The U.S.C. 112, second paragraph rejection of claims 1, 22, and 23 has been withdrawn in view of Applicant's remarks.

Allowable Subject Matter

Claims 1-4, 6-16, and 22-25 are allowed. The following is an examiner's statement of reasons for allowance:

As per claim 1:

Seidel teaches an apparatus for controlling the operation of the data channel in a mobile communication system that simultaneously a control message over the data control channel and the data over the data channel and supports hybrid automatic repeat request (HARQ) (abstract), the apparatus:

- a physical layer (col. 7, lines 62-65) for receiving the traffic data and the control message from the data control channel and the data channel separately and decoding the received traffic data and control data (col. 2, lines 26-28);
- processing a result of the decoding of at least one of the received control message and data (col. 7, lines 26-28; the result of decoding the sequence numbers in step 260 is used to decode PDUs in step 270) and for controlling the

physical layer according to a result of the processing (col. 7, lines 35-37; an ACK must be sent on the physical layer according to the definition as provided above).

Not explicitly disclosed by Seidel is a physical layer's HARQ controller. However, Fong in an analogous art teaches a physical layer's HARQ controller (col. 5, lines 9-18). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the HARQ operations of Seidel to operate in the physical layer. This modification would have been obvious to one of ordinary skill in the art, at the time the invention was made, because one of ordinary skill in the art would have recognized that the teachings of Fong would have enabled the cooperative use of layer 1 and layer 2 ARQ to avoid unnecessary retransmission requests (col. 4, lines 51-57).

Seidel teaches receiving data from the physical layer (col. 7, lines 62-65); and determining an action based on the data received (col. 7, lines 35-37). Not explicitly disclosed by Seidel or Fong is that the physical layer's HARQ controller comprises two HARQ state machines for receiving state information from the physical layer and determining a state transition to next state.

However, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to implement the actions of Seidel above using state machines such as the one shown in Fig. 5. This modification would have been obvious to one of ordinary skill in the art, at the time the invention was made, because one of ordinary skill in the art would have recognized that state machines are models of a

system, and that the system of Seidel could have been modeled using state diagrams which were well known to those in the art.

However, none of the prior art of record teach or suggest the two HARQ state machines are selectively enabled based on a number of acknowledgement/negative-acknowledgement (ACK/NAK) processing delay time slots. Claims 2-4, 6-16, and 22-25 inherit the limitations of claim 1 and are allowable for at least these reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
